

STL_rQueue::poptop

STL_rQueue::poptop32

STL_rQueue::top

```
graph LR; A[STL_rQueue::poptop] --> C[STL_rQueue::top]; B[STL_rQueue::poptop32] --> C;
```

The diagram illustrates a memory management or pointer manipulation scenario. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'STL_rQueue::poptop' and the bottom box contains 'STL_rQueue::poptop32'. On the right, there is a gray rectangular box with a black border containing the text 'STL_rQueue::top'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box. The top arrow starts from the right side of the 'STL_rQueue::poptop' box, and the bottom arrow starts from the right side of the 'STL_rQueue::poptop32' box. Both arrows converge towards the left side of the 'STL_rQueue::top' box, indicating that both 'poptop' and 'poptop32' point to the same memory location as 'top'.
